

Autologous fibrinogen for tissue-adhesion, hemostasis and embolization.

Authors: Gestring G.F., Lerner R.

Publication Date: 1983

Abstract:

The use of commercially produced fibrin glue, successfully used for many surgical procedures in European operating theatres, is prohibited in the USA due to FDA regulations. In this presentation the authors demonstrate the extraction of fibrinogen from the patient's own blood, thus avoiding possible viral contamination and allergenicity. Clinical and experimental applications are demonstrated.
