

# **Long-term experience with the use of fibrin sealant in aesthetic surgery.**

Authors: Grossman J.A., Capraro P.A.

Publication Date: 2007

## **Abstract:**

The authors continue to study the use of fibrin sealant in aesthetic surgery, extending their clinical experience to include aesthetic breast and body procedures, as well as facial surgery in 957 patients. They conclude that fibrin sealant is efficacious in eliminating the need for drains and compressive dressings while reducing the incidence of hematoma and seroma. © 2007 American Society for Aesthetic Plastic Surgery, Inc.
