

# **Application of fibrin glue in plastic surgery: Cervico-facial reconstruction and aesthetics. [French]**

Authors: Rheims D., Meyer R., Daverio P.J.

Publication Date: 1986

## **Abstract:**

This article describes a selection of cervico-facial plastic operations, to underline the interest of using fibrin glue for reconstructive and aesthetic surgery. The goal of fibrin glue, as a complementary technique of suturing, is to perfect the operative results, by means of its physico-chemical qualities, which ensure excellent tissue adherence and favour the stimulation of wound healing.
