

Experimental transvitreal fibrin gluing of the retina. [German]

Authors: Emmerich K.-H., Busse H., Slezak H., Steinkogler F.-J.

Publication Date: 1989

Abstract:

The authors report on the transvitreal application of fibrin glue in retinal detachment surgery. Methods of application and the course of postoperative resorption are illustrated with reference to experimental studies on rabbit eyes. The prospects for this new method of creating chorioretinal adhesions are pointed out and discussed.
