Publication Date: 1994

Abstract:

From April 1990 to May 1993, 15 patients with thoracic complication or thoracic diseases have been treated with self-made fibrin sealant. All patients have been cured successfully in a short time without thoracotomy. The methods of its make-up, administer and assessment were discussed. It is economical and effective. The major advantage is simple method and easily administered. It could be used in other surgery.
