

The use of human fibrin glue in retropubic adenectomy by the Millin's technique. [Italian]

Authors: Savare G., Boni E., Frega G.C.

Publication Date: 1991

Abstract:

The authors take into consideration the use of human fibrin glue as a completion of the retropubic adenomectomy according the classic Millin technique. Human fibrin glue is applied on the suture line of the prostatic capsule and in the retropubic space. The Authors compare two series of ten operated with and without the use of this biological glue.
